Keywords: Higher Vocational Colleges, First Class Grassroots Party Organizations, Party Construction

Abstract: The grass-roots organizations in Colleges and universities are the places for the development of various undertakings. Strengthening the party building at the grass-roots level in Colleges and universities is a necessary condition for building a first-class party. At the same time, through moral cultivation, we should standardize party construction at the grass-roots level, give full play to the pioneering role of Party members and cadres, strengthen party construction, promote education and scientific research, and strengthen school enterprise cooperation. Improve the school's ability to contribute to society.

1. Introduction

The grass-roots party organizations in Colleges and universities are the battleground for the reform and development of colleges and universities[1]. The parties, buildings and improvements of colleges and universities strengthen the conditions of the central, local and local committees, raise awareness, strictly follow the party's management, clarify the objectives and tasks, Party construction, and closely unite school education and scientific research. Then, in the management work, we have grasped an important point, broken through the problems, made up for the shortcomings, grasped the standards, first-class production, the effective political core role of the Party committee, the role of the Battle Fortress as the grass-roots party organization, and the pioneering role of the party members. Collect information from local residents. Social practice is the defect of learning theory of medical students' practice. It can not only discover the ability of medical scientific research and innovation, but also analyze the data collected under the guidance of the cultivation instructor. About half of our medical students come from remote mountainous areas or ethnic minority areas. The development of medical treatment is relatively backward, about 80% of medical students are employed after they have completed their studies. Therefore, colleges and universities should fully understand the importance of training medical students' scientific research and innovation ability, and train comprehensive medical personnel in ethnic areas[2]. This is of great significance to the development of medical and health services in remote mountainous areas and ethnic minority areas.

2. Let Medical Students Actively Participate in Teacher Research Projects

Teachers are the guide of scientific research work, and their own scientific research level directly affects the quality of scientific research work of medical students. Therefore, in view of the characteristics of higher education, in order to improve the academic structure of teachers' scientific research team, schools should pay attention to it. Through participating in cooperative training and academic conferences at home and abroad, it provides broad space for academic exchanges between teachers and the outside world, and promotes the development of teachers' profession[3]. After the adjustment and adaptation of the first grade, combined with their own professional characteristics and requirements, they must participate in the scientific research activities of the second grade teachers. Teachers should teach students according to their own special skills, put forward necessary conditions and training goals, and encourage medical students to set goals. In the practice of specific scientific research, I can introduce the most advanced knowledge into my personal medical student guide and guide related theories. The training requirements cover six aspects: establishing correct goals and ideals; technology development, focusing on scientific thinking ability. The second, third and fourth academic years are the center of the teachers' scientific research activities. Medical students need to arrange research and experiment time reasonably.

2.1. Announce the Students of Medical College and Reward Them to Host Scientific Research Projects

After participating in Teachers' scientific research and scientific research, medical students have the original basic knowledge of experimental technology, combined with their own research interests and hobbies. Teachers are scientific research projects of various types of medical students, which are suitable for medical students to follow the project book, to request information, project design, project planning, implementation, selection of experimental technology, data processing and statistics, and the conclusion of the project is possible. Paper publishing is another aspect of scientific thinking and movement[4]. These are not only the further study of theory, but also one of the main methods to promote the independent research and innovation of medical students.

2.2. Please Establish a Small Scientific Research Group for Students

Whether the self-organized and participatory scientific research projects of medical researchers are limited in the number of medical students after that, therefore, the scientific research innovation of college students and the establishment of the group are lectures of scientific research of college students on the research ability of medical students. The scientific research innovation and production group of college students are held. According to the communication and discussion between small scientific research groups, they can communicate with each other The role of learning[5]. At the same time, it can also encourage more medical students to participate in scientific research activities. Different from the compulsory theoretical study and experimental class, the starting point of this class is voluntary, the method is random, the content is diverse, the information exchange is equal, and it is more popular with students. On the other hand, the cultivation of the initial scientific research ability of medical students deepens their understanding of the theoretical knowledge of teaching and improves their practical ability. At the same time, it also improves the scientific thinking and innovation ability of medical students. In addition, the importance of improving and strengthening the quality of scientific research of medical students is a necessary condition for the development of the times and society. The ultimate goal of higher education is to cultivate innovative medical talents to meet the needs of the society. Therefore, it is

necessary for universities and colleges to provide a good research platform for medical students to cultivate medical talents with scientific research ability and innovation awareness.

3. The Practice and Effectiveness of Qujing Medical College in Cultivating and Practicing the Core Value of Socialism

Qujing Medical University was founded in 2006. In 2010, the talent training assessment of colleges and universities was qualified. The university is recognized as one of the first batch of key vocational universities with distinctive backbone in Yunnan Province[6]. High level vocational education teacher training base, international nursing practice level demonstration project cooperation unit, Yunnan high quality college construction unit. In the past 10 years, from ChuKeQi Yunnan Medical University to ChuKeQi Medical University, we have actively cultivated and practiced the socialist core values and made achievements.

3.1. Construction of Socialist Core Value Demonstration School

The Party committee of Chuqing medical college is very important to the construction of socialist core values. In 2016, after active application, qualification examination and expert evaluation, Chuqing medical college was awarded the title of "socialist core value demonstration school". In 2017, the opportunity of making implementation plan constructed by socialist core robbery teacher training of Medical University was regarded as the cultural characteristics, the role of cultural education, the practice of socialist core values, the basis of ideological culture for the majority of young students, and the establishment of socialist core values has coordinated and promoted the construction of campus culture. The demonstration of the school's socialist core value focuses on the construction of the school. The school gave a special speech on the socialist core value, held an essay contest on the socialist core value for students, and held a speech contest related to the socialist core value[7]. Organized students practice socialist core values, carry out practical education activities and carry out social development. This paper studies the core value of socialism and publishes the result set of the empirical school of the core value of socialism in Chuqing Medical University. In order to carry out a series of activities, teachers and students are the central value of socialism. From the deep understanding of their own ideas, the cognitive theory of the content of the central value of socialism, from the internalization, the internalization of the theory, and have a good response to the planting life.

3.2. Steadily Promote the School's "Moral Lecture"

Since 2011, Chuxiong Medical University has actively explored the campus culture of "big doctor, University, big love and big boss". Driven by the propaganda of the Party committee of the University and the United Front Department, it works closely with the Youth League Committee of the University and various departments to discover people and things around them and actively carry out moral propaganda. Through the typical on-the-spot statement, teachers and students are deeply educated in the activity and get good results. Since the launch of the activity, many excellent teachers and students come to the school to talk about ethics. They personally narrated their research, life and family around the theme of socialist core values[8]. They are sent to pursue the moral and kindness of teachers and students who are endowed with positive energy and inspiration.

3.3. Set Up Headmaster Class

"President class" is a forum activity sponsored by the president of Chujin Medical University and organized by the adolescent Alliance Committee. As a major participant, it recruits young students in schools, aiming to stimulate their wisdom, improve their literacy ability and provide them with opportunities to understand life. The excellent culture of "President class", "quality, Medical University, great love, everyone" has developed a scholarly atmosphere to promote the cultivation of medical students' staff spirit, flourished campus culture, helped young students to "grow up" theme, various postures and forums with different contents, through the development of scientific and cultural concepts of young students actively participating in campus activities, from learning Students' stimulation, stimulation, knowledge and practice improve their ability and expand the prospect of humanities. At the same time, improve the comprehensive ability, guide the medical students to establish a correct world outlook, establish a correct life, value range and medical prospects. Since the spring semester of 2017, it has been loved by teachers and students. The headmaster's classroom is a new bright spot for the school to cultivate and practice the core value of socialism[9]. At the same time, it is also a window to spread schools, inspire wisdom and exchange ideas.

3.4. Social Practice

Please create a second course for growth. It is very important to understand the society, understand the national situation, increase talents, contribute to the society, cultivate patience, cultivate character, and strengthen social responsibility for promoting the progress of college students. Summer vacation takes college students as the object to carry out the social practice of "entering the countryside". In recent years, in response to the call of the Central Committee of the Communist Youth League and the Communist Youth League Committee of the Communist Youth League, the school organizes 300 training teams and about 300 students to carry out social activities of "three chess villages" in summer. This activity involves political theory propaganda, national condition, social condition investigation, education, care, care, beautiful rural construction, independent practice, poverty alleviation, drug management, AIDS prevention and other fields. This is to provide a platform for the growth of young students' talents in small and medium-sized cities such as Yunnan. In order to strengthen the University's new pass, its ideological and political education work, improve self-service, self-management, and strengthen self-education ability can be the training to achieve the goal[10]. A number of excellent training teams have been awarded the title of "local backbone team" by Yunnan local Party committee and other units of the Communist Youth League, and the school Youth League has also been awarded the title of "excellent organization unit". In the "three social practice activities in rural areas", students have deepened their understanding of the state and grass-roots level, and realized the mission and responsibility of college students.

4. Conclusion

In any case, in the context of market economy, it is necessary for independent colleges to carry out competitive education. I hope that when independent colleges start entrepreneurship training in the future, they can combine the suggestions in this article. The training strategy for entrepreneurs is based on the establishment of higher education team, following the concept of employment oriented entrepreneur training, reasonably teaching students entrepreneur knowledge, and providing students with corresponding entrepreneurial practice opportunities. Students can effectively learn and use, and ultimately improve the effectiveness of entrepreneurship training.
