Keywords: Higher vocational student, Network responsibility awareness, Student management

Abstract: In the context of the Internet age, people's lives have undergone major changes. For college students, the network environment has changed the ideology, psychology, and behavior of college students. As one of the important human resources for the development of the country, college students are particularly important to guide them to establish a correct outlook on life, world outlook and values. Therefore, it is necessary to strengthen the management of college students and cultivate their sense of responsibility. Based on this, this article first analyzes the reasons for the lack of sense of responsibility of college students, and then discusses specific training strategies in the management of college students, hoping to provide valuable references for related work.

1. Introduction

At present, the Internet is spreading at an unprecedented speed on university campuses. Its characteristics of openness, equality, mass of information, and interactivity allow college students to relax on the Internet and unscrupulously display their own imagination. Strength, show your own personality and experience your own success. This virtual and free network space provides college students with a broad and three-dimensional communication space and a convenient communication platform, creating a new network virtual society. The popularization of the Internet has a positive impact on social development, as well as on the physical and mental development and life of college students. However, everything has two sides, and the Internet has also brought many negative effects on society and people. The complexity of network information resources, the diversification of value, and the immeasurability of content are bound to have a great impact on the political stance, values and psychological development of college students; the unconstrained nature of the network, The feature of concealment has greatly contributed to the indulgence and fluke psychology of some college students' netizens, freeing them from many constraints and pressures in reality. They cannot be as self-conscious in cyberspace as they are in real life. To maintain a high sense of responsibility and low legal awareness will have a great impact and a serious impact on college students' sense of network responsibility. This not only brings opportunities for the effective development of ideological and political education in colleges and universities, but also makes them face severe challenges. Therefore, under the network environment, strengthening the cultivation of college students' awareness of individual responsibility and improving college students' awareness of network responsibility are the general trend in the context of informationization.

2. Reasons for the Lack of Sense of Responsibility of College Students under the Internet Situation

Driven by China's science and technology, China has entered the Internet era. Under such a social background, although the quality of life of college students has been improved, their sense of responsibility has declined year by year. The specific reasons are mainly reflected in the following aspects. First of all, the Internet is a double-edged sword. Although it contains a lot of information and knowledge, students can inquire about the materials they want to learn at any time, but at the same time, there are also some bad information in the Internet. Under the influence of information, students' values will deviate, their sense of responsibility will be weakened year by year, and their

relationship with society will become more and more alienated. Therefore, colleges and universities should purify the network environment in their student management work at this stage. Cultivate students' sense of responsibility on the basis. The second is the university students' own reasons. Under the influence of many factors, university students are prone to psychological problems. If they cannot provide timely guidance on their mental health and enhance their psychological quality, they are most likely to have a social hostility. Make more contributions to society. Finally, in the student management work, colleges and universities have not guided the sense of responsibility of college students. At this stage, many colleges and universities in our country pay more attention to the mastery of students' professional skills and lack of emphasis on the cultivation of social responsibility consciousness. This makes college students It is impossible to clarify the value of the role of responsibility consciousness.

Ideological and political consciousness: Students only pay attention to some entertaining variety shows and TV programs on the Internet, and are indifferent to current affairs and politics. Legal awareness: Although our college students know some basic legal knowledge at this stage, in daily life, when encountering violations of law and discipline, most students will choose to turn a blind eye to avoid revenge. Moral responsibility awareness: Under the drive of interest, college students often use network technology to make some violations of law and discipline. For example, some college students will use mobile phones to cheat during exams, and even some students will buy answers online in order to obtain higher grades. Awareness of social responsibility: At present, even if students see terrorism and the development of the country on the Internet, students often show indifference and only regard themselves as the center. Family responsibility consciousness: Children usually enjoy all the love of their parents, but in normal life, they are not considerate of their parents and blindly ask for living expenses from the family, which increases the burden on the family. This situation shows that students do not have a sense of family responsibility.

3. The Importance of Cultivating College Students' Awareness of Network Responsibility

The realization of a person's value requires the unification of personal value and social value. As the most sensitive and active group of contemporary college students, their values have also undergone tremendous changes in the process of information society. Therefore, how to correctly guide college students to find their own value in this complex and virtual network society, and to unify personal value and social value, and realize their value in life, is a key subject of college education. Responsibility is a person's conscious attitude towards his own behavior and personal responsibility in his social environment. Contemporary college students should clearly recognize their own environment and position, and while working hard to pursue their dreams, improve themselves, and realize their own values, they should have the courage to assume their responsibilities to society. Undergraduates in the flood of information age, only by unifying their personal value and social value, can they not only make continuous efforts to create social value, but at the same time enable themselves to gain experience and growth and constantly improve themselves, so as to truly realize themselves in society. Value in.

The virtual space of the Internet, as an alternative living space for the main body of the Internet, provides college students with many conveniences. Reading, working, making friends, shopping, and entertainment can all be realized in the Internet society, allowing us to transcend time and space. The limitations and barriers of the world create a magical world of its own. However, while the Internet has brought a magical world to mankind, it has also created many difficult problems for itself to overcome and solve. Therefore, the healthy development and improvement of the network, like the real society, also requires the intervention of responsibility education. In fact, in the network environment, humans are the masters of the network and its information. The operation of the network, the exchange and dissemination of information resources all require humans to complete. Whether it is information collection, transmission, or online shopping, chatting, entertainment, etc., they are not behaviors that have nothing to do with other network entities, but behaviors that affect the interests and power of other network entities in one way or another. In other words, it is a behavior with a certain social significance and value. Therefore, all the activities

of the network subject in the cyberspace are also moral activities, and the moral inspection, evaluation and related responsibilities of the network subject can be investigated. The level of individual responsibility awareness of the network can reflect the level of network ethics. The level of awareness of the network subject's sense of responsibility for their own network behavior and the consequences is related to the perfection and healthy development of the network, and the cultivation of the awareness of the network subject's responsibility is crucial important. College students are the largest and most special group in the network society, and their sense of responsibility is related to the healthy development of the network. Therefore, individual college students should consciously improve their own network literacy. Through network responsibility education for college students, improve their awareness of network responsibility, so as to promote the development of a healthy and civilized cyberspace.

4. Strategies for Cultivating College students' Sense of Responsibility in the Management of College Students under the Internet Situation

The campus network of colleges and universities can grasp the ideological trends of college students in time. In order to optimize the online environment of students, the campus network can be constructed inside the school, which brings convenience to students while restricting students' online behavior. When building a campus network system, it is necessary to ensure the scientific nature of the campus network construction from the following aspects. First of all, the scope of the campus network needs to be determined. Generally speaking, the campus network is a kind of local area network. Therefore, if there are many campuses in colleges and universities, when constructing the campus network, ensure that the area is unified. In addition, the scope of online content needs to be determined. In the process of providing online channels for students, it is necessary to control the content disseminated online, and prohibit pornography, gambling, drugs and other information content from flowing into the campus network to ensure the campus network the health of the content. Secondly, in the campus network, you need to set permissions, and you can specifically set the method of identity authentication. Before logging in, students need to enter a user name and password to prevent social personnel from entering and protect college students' access to the Internet.

A sound network management mechanism can effectively purify the network environment. When improving the network management mechanism, it is first necessary to formulate corresponding rules and regulations. China needs to promulgate some laws and regulations and increase penalties for those who disseminate harmful information on the Internet. Strengthen, restrict the behavior of information disseminators, so as to ensure the safety of college students' surfing the Internet, and prevent bad information on the Internet from affecting college students. Secondly, in the management system, it is necessary to strengthen cybersecurity education to avoid the emergence of cybercrime. When educating students on cybersecurity, it is first necessary to improve students' right and wrong discrimination ability. At the university level, students have not yet established a complete outlook on life and Values and their cognition will still be affected by the external environment. At this time, students' discrimination ability and ideological understanding will be affected, and the value evaluation standards will not be correct. Therefore, in network security education, improve students' discrimination ability. It is an important measure to avoid the emergence of cybercrime. In addition, to strengthen network security education, it is necessary to guide students to consciously abide by the network management regulations formulated by the state, and correctly use the network for entertainment and learning in accordance with the corresponding legal guidelines. Secondly, college student management workers need to closely observe student activities, strengthen network security investigations, and fundamentally avoid the emergence of illegal incidents.

There are many opportunities for college students to participate in social practice activities. In social practice activities, students' sense of responsibility can be deepened, and their level of awareness can be improved so that they can understand the importance of sense of responsibility. When college student workers organize students to participate in social activities, they can first

encourage them to participate in some club activities. In club activities, they can exercise their sense of responsibility. In order to improve the enthusiasm of students to participate in clubs, they can give some outstanding club members Be rewarded. In addition, during the holidays, students can be organized to provide free services in rural welfare homes, nursing homes, etc., so that they can establish a sense of social responsibility. In addition, for some students with outstanding abilities, they can be encouraged to participate in more public welfare activities of social welfare organizations, such as rural education support, so that students can move from the campus ivory tower to the grassroots level and get close to real life, thereby fostering a sense of social responsibility.

5. Conclusion

In the context of the Internet age, the continuous development and popularization of network information technology has had more and more extensive and profound impacts on various fields of social life and the growth and success of college students. Network responsibility awareness has attracted more and more people's attention, and the cultivation of college students' awareness of network responsibility has also become an important part of the ideological and political education in colleges and universities. In-depth discussion and research on the actual situation of college students' sense of network responsibility and seeking the best training path are the innovation of colleges and universities in the work of ideological and political education and the requirements for achieving effectiveness. It also conforms to the development and development of the current Internet age. trend.
