Keywords: Higher Vocational Colleges; Study Style Construction; Library; Resource Utilization

Abstract: This paper expounds the role of higher vocational college libraries in the construction of academic style from the university's strength symbol, academic institutions and educational institutions, and expounds its specific role from the aspects of humanistic environment creation, collection resource utilization and support of academic style construction. The development of informatization resources, the holding of scientific research competitions and the strengthening of management explain the main path of making full use of library resources in the process of building a style of study in higher vocational colleges.

1. Introduction

The style of study is not only the display of the level of running a university, but also the quality of its teaching. The library is rich in cultural resources and plays an important role in the construction of academic style in higher vocational colleges. Only by strengthening the guidance of students in the process of education, and taking advantage of the functions and resources of the library, can we build a good academic atmosphere and promote the continuous improvement of the quality of running schools.

2. The Main Role of Libraries in the Construction of Study Style in Higher Vocational Colleges

2.1. Symbolizes the cultural strength of colleges

In the evaluation system of higher education, there are clear requirements for the number of collections in the library, the amount of students to read, the services in the library, management, and the utilization of literature resources. Therefore, the library symbolizes the teaching level and internal cultural strength of higher vocational colleges. In the process of the development of the times, the creation of information-based libraries has gradually become the focus of colleges and universities. Under the background of informatization, the library resources are used to show the good study style of colleges and universities, and to create a talent training base, which is one of the main roles of university libraries in the construction of academic style[1].

2.2. Academic institutions

The library of higher vocational colleges is the place where information, resources and other places meet. Among them, newspapers, impurities and books in the library become the carrier of communication culture. In addition, various academic research and competition projects in the museum can play a role in the construction of school study style. In the process of gradually improving the campus network, higher vocational colleges provide convenient services for educators and students to carry out various academic research by purchasing academic resource databases such as "Knowledge Network", "Weip" and "Wanfang". In the process of building a style of study in higher vocational colleges, the role of academic institutions in libraries is becoming increasingly evident.

2.3. Educational institutions

Among the colleges and universities, the library is an important place for students to learn after

school. In the study room and reading room, students can learn more fields. The management in the library determines the learning atmosphere of students, and it is also one of the important evaluation indicators for the construction of academic style in colleges and universities. It is specifically manifested in the standardization of students' formation of a good sense of study style and discipline. In the management process, various graphic and text information can be placed in an eye-catching position, so that students can be influenced by culture, and at the same time improve the management system in the library, so that students can pay attention to the interests of others when acquiring knowledge. Through the educational role of the library, students are guided to maintain a correct attitude towards learning and form a style of study that is hard, rigorous, and specialized.

3. The Main Role of Libraries in Higher Vocational Colleges in the Construction of Study Style

3.1. Building a Humanities Campus

The library of higher vocational colleges is not only the functional department of colleges, but also the second classroom for students to learn. The use of the library can cultivate the comprehensive quality of the students, so it has a leading role in the process of building a style of study in colleges and universities. Through the rational allocation of resources in the library, the students in the library are guided to study quietly and civilized in the hall, showing the humanistic environment of higher vocational colleges. At the same time, the library is rich in knowledge and talents, and the service level of the staff in the library can affect the construction of academic style in colleges and universities. In this regard, it is necessary to give play to the educational role of the staff, in the daily service process, taking into account the students' learning and spiritual cultivation, to provide a high-quality service for them, to create a harmonious campus for information sharing, and to enhance the cultural atmosphere of the library for students. To play its leading role in the construction of academic style.

3.2. Utilization of collection resources

The rich cultural resources and information resources in university libraries are an important foundation for the construction of study style. At the same time, the resources and service process in the library are an important part of the university's construction process. Therefore, higher vocational colleges should focus on the characteristics of resources, combine the informatization resources to show the richness of the collection content, and create a platform for educating people to make online appointments, information inquiry, book lending and service consultation. Construction features. Actively improve the reading environment in the museum, form an integrated management model, attract students from higher vocational colleges to take the initiative to learn in the library, show that the library is the training position for college talents, play its role in educating people, and spread excellent academic style.

3.3. Supporting the construction of the style of study

In higher vocational colleges, the library is the main place for students to acquire knowledge and review independently. Students spend most of their time in the daily study and preparation for the exam, so the level of service in the library can show the style of study in colleges and universities. Similarly, the library played an important supporting role in the construction of colleges and universities. For example, some university libraries adopt a 24-hour duty system in the management process, which extends the library opening hours and is also open to students during holidays, so that students are very convenient to participate in reading in the library or in self-study. Provide students with quality service forms, such as when students are engaged in graduation design, they can hold relevant knowledge lectures, provide information search services for students in combination with the information resources in the library; regularly promote the postgraduate examinations on the large screen of the library and each Class-level examinations, qualification examinations and related information, with a comprehensive service within the library, provide

students with humanized services, and provide support for the construction of colleges and universities[2].

4. The Study Style Construction and the Interactive use of Library Resources in Higher Vocational Colleges

4.1. Actively develop information resources to give play to service advantages

According to the foregoing, the library has played a vital role in the construction of the academic atmosphere of higher vocational colleges. Considering that the library of higher vocational colleges is responsible for providing various information resources for the students' entrance examinations and textual research, including various professional counseling books, study questions, etc., so in the process of leveraging the advantages and advantages of library resources to promote the construction of higher vocational colleges, it is necessary to actively develop more library information resources, so that their existing service advantages can be fully utilized. For example, on the one hand, the library can actively use the various modern information technology to transform the paper resources in the library into electronic resources of format standards, and upload them directly to the library official website or the higher vocational college education platform for students. Read and use anytime, anywhere, to facilitate students to study and study. On the other hand, libraries also need to actively organize readers to carry out various forms of training and education activities with rich content, so that they can have higher information awareness and information retrieval capabilities, so as to be able to achieve various literature resources in the library. Make full use of information resources. For example, on the basis of the integration and utilization of its existing general counseling desk and teacher search engine, the library of higher vocational colleges can organize the teachers and students to carry out operational skills training related to database and network information resource retrieval, especially The training content and the national computer secondary examinations that students need to participate in are related to each other, so that under the effective use of library service advantages and information resources construction, the school's style of study can be promoted, and students can deepen their knowledge and skills. Combining knowledge and action creates favorable conditions.

4.2. Relying on scientific research and competition activities to promote the construction of academic style

In the interactive use of academic style construction and library resources in higher vocational colleges, libraries of various colleges also need to fully integrate their own actual conditions, focus on their own research activities, student competition activities, etc., and actively provide students with corresponding libraries. Service, thereby promoting the in-depth implementation of the work style construction in higher vocational colleges. For example, the library can actively use the big data analysis technology to deeply collect and analyze the information demand data of students who need to participate in scientific research activities, competition activities, or postgraduate studies and graduation design, thereby extracting and analyzing the corresponding core features. Targeted students are provided with corresponding information resources to meet their diverse information needs. For example, according to the students' majors, grades, etc., for the students who need to participate in the graduation design, the library needs to base on the collection and analysis of the student's graduation design direction, specific content, etc., and actively provide corresponding journal articles. The scientific research results show information, and the graduation design completed by the students is concentrated and a corresponding special database is established. On this basis, the library of higher vocational colleges actively communicates with the school league committee to guide students to set up student reader committees according to their actual needs and interests, and establish a good cooperative relationship with them. A variety of service activities, such as good book sharing, postgraduate research or scientific research guidance, can effectively improve the overall service quality of higher vocational college libraries, and also lay a solid and reliable foundation for building a good academic atmosphere.

4.3. Strengthening the management of the study room and building a good learning environment

In the current vocational colleges, many students will take their seats in their preferred learning venues. Therefore, in the special time period such as the test season and graduation season, there are often a large number of students in the library of higher vocational colleges. The situation of the self-study room seat and so on has even evolved into a more serious conflict event, which has greatly affected the normal development of the school library's work, and also adversely affected the school's academic atmosphere construction. To this end, this paper believes that in the process of the construction of academic style and the interactive use of library resources in higher vocational colleges, relevant staff also need to consciously strengthen the management of the library's self-study room, thus creating a harmonious and warm learning environment and learning environment for the readers. .On the one hand, the library can supplement the punishment rules for bad behavior such as squatting and occupying seats in time according to its existing self-study room management system. Once students have violated the rules of the library's self-study room management rules, they need to be treated as appropriate. The severity is punishable accordingly, so as to effectively restrain the students' behavioral norms, so that they can consciously abide by the learning order of the library's self-study room, thus forming a good academic atmosphere in the subtle. On the other hand, the library can transform the original large-area self-study room into a number of small-scale self-study rooms according to their actual conditions, such as the postgraduate study room, graduation design room, etc., and configure related books according to the student needs of their respective classrooms. And literature and so on. Under the people-oriented management principle, the realization of the humanized management of the library self-study room can not only provide intimate, convenient and efficient library services for students, but also create an excellent academic atmosphere and help higher vocational colleges. Complete the study style construction work[3].

5. Conclusion

In short, libraries play an important role in the construction of academic style in higher vocational colleges. Give full play to the advantages of collections in the library, create a good humane campus environment for students, strengthen the information construction in the museum, and explore a large number of cultural resources. At the same time, with the help of scientific research projects and competitions, we will improve the creation of academic style and strengthen the library. The management constantly optimizes the environment inside the museum, shows the humanistic charm of higher vocational colleges, and continuously improves the quality of personnel training.
