Keywords: Great Ideological and Political Education; Ideological and Political Courses in Colleges and Universities; Practical Strategies.

Abstract: In order to improve the practical effect of ideological and political education, set up the educational concept of "great ideological and political education" and carry out reform and innovation from a more open perspective, the construction of "great ideological and political education" must reflect the thoughts and wisdom contained in the educational concept. Setting up the sense of discipline, implementing the concept of "people-oriented", innovating the mechanism, integrating the team, expanding the occupation, optimizing the actual evaluation method, "comprehensive staff education, the whole process of education, and forming the pattern of "all-round education".

The ideological and political education system is an important part of College Students' Ideological and political courses. It is necessary to improve and establish the guarantee mechanism of practical education for all courses of ideological and political theory courses. It is also important to strengthen practice contact and explore long-term humanistic education mechanism. According to the research on the ideological and political course in university in recent years, practical education has made great progress, but from the perspective of educational effect, there is still a certain gap between ideal and reality. In order to further improve the effectiveness of practice, ideological and political course practical education reflects the wisdom and thoughts in the "great ideological and political" educational concept and carries out reform and innovation from a more open perspective from the perspective of understanding the content, methods, functions, environmental occupations, objectives and tasks of ideological and political course practical education.

1. The role and significance of ideological and political practice education mode in colleges and universities from the perspective of great ideological and political person.

In the process of university development and continuous coordination of Ideological and political practice education mode, from the perspective of Ideological and political education, it is not difficult to find obvious advantages in this education mode. The requirements of ideological and political education course are also very high. We should always emphasize the requirements and constantly improve the openness of Ideological and political education. The teaching methods of ideological and political classroom teaching in China's colleges and universities require that the teaching content be continuously expanded in the teaching process. Textbooks are important knowledge carriers, but the use of textbooks is too important. In this way, students will find the classroom teaching very boring, in order to improve students' interest in learning and mobilize the enthusiasm of students in the classroom, to avoid rote learning in the learning process, we need to strengthen the teaching of multimedia courseware. It is necessary to help students understand the content and scope of education more specifically, and understand their ideological status and acceptance ability.

The development of the Internet and the continuous opening of education also provide students with more advanced and better educational equipment and resources. Students can not only use this advanced teaching equipment, but also better accept the influence of ideological and political education. One of the most prominent is multimedia information technology. With the continuous application of multimedia technology in the classroom, continuous improvement and enrichment of ideological and political education can widely improve the flexibility and autonomy of classroom teaching, and the basic content of ideological and political education can better stimulate students'

learning motivation and interest.

Therefore, teachers are gradually building a variety of interactive, more three-dimensional, open education platform, so that students can better understand the ideological and political content of this way of education, and make it more systematic. This kind of education mode needs to emphasize the practicality of Ideological and political classroom education. Large universities need to adhere to the dynamic development in the ideological and political theory of college students, and conform to the continuous development of society and education environment. The continuous change of the company can be adjusted accordingly in time.

At the same time, in order to fully stimulate students to learn and encourage them to actively participate in a wide range of practical activities, it is necessary to carry out more meaningful practical education activities, not only need long-term education and training, but also need continuous subtle influence and edification. Therefore, the university should ensure the continuity of the education process in the ideological and political course teaching, always pay attention to the completeness of the process of educational activities, and need to constantly innovate education methods.

2. Guided by the educational view of "great ideological and political education", the importance of practical teaching of ideological and political course should be recognized.

The traditional ideological and political education mode is based on books, only from books, so that students will feel boring in the classroom, no learning motivation. Strengthening the reform and practice of ideological and political education has certain social value and practical significance. Ideological and political education is to help students set up a correct outlook on life, and understand what kind of life path is right, how to do it. It is necessary to adhere to the principle of seeking truth from facts, not to be extravagant and formalistic. At the same time, we should promote the reform and innovation of ideological and political courses and keep pace with the times. Practice is the only criterion for testing truth. Therefore, university teachers should take Marxism theory as the guidance, apply scientific teaching methods in the classroom, and integrate theory with practice, so that young students can truly understand the development process of Marxism through rich practical activities. In this way, the content of Ideological and political course will expand from abstract theoretical knowledge to vivid practical activities, as well as Marxism in China. The basic standpoints and viewpoints of Marxism are used to understand the latest achievements and guide learning how to use, analyze and answer practical questions, so as to promote the real research and development of Marxism.

From the discipline construction to accumulate strength, promote the development of Ideological and political practice teaching activities "the establishment of disciplines not only provides value support for sustainable development, but also provides the direction of curriculum reform and development goals and knowledge foundation." To support discipline construction, the construction of curriculum will be a tree without roots and water without a source, and so will practical education. In the practical guidance of the current ideological and political process, according to the survey, we can see a common phenomenon called "dragonfly skimming the water". The focus is to describe the occurrence and progress of events without theoretical depth. This kind of education and teaching still stays at the perceptual level can't have a significant impact on students' thinking mode. In this regard, the practical education of Ideological and political course must play a guiding role in the discipline construction.

The theme of practical education will be put forward by the personnel engaged in practical education. On the large-scale discipline platform of Marxist theory, we will deeply analyze practical cases, carry out detailed academic research, and bring the relationship between practical education and Marxist theory into practical cases. We need to explore Marxist outlook and methodology, which provide detailed, creative and convincing explanations of real-world cases, and truly understand theory and practice. Only in this way can we guide them to establish a correct world outlook, outlook on life and values, and students can achieve positive and effective education effect.

3. Practical teaching principles of ideological and political course in colleges and universities.

The practical education principles of Ideological and political course are as follows:

First, practicality. The theoretical basis of Ideological and political education is very strong, but its practicality can't be ignored. In order to make students apply the knowledge they have learned to real life and improve their moral quality, ideological and political education must be feasible.

Second, humanization. Humanization is the most important education concept at present, the goal of education is cultivating high-quality talents. Through humanized education, we should teach the educational idea of equal theme and purpose, respect students' subjective status, improve students' subjective consciousness, and offer ideological and political courses to ensure the effective development of ideological and political education.

Third, openness. The openness of ideological and political education is mainly manifested in the openness of educational content, which is an important concept under the concept of ideological and political education. According to the social situation, teachers need to combine ideological theory and political theory to explain the typical education content. The concept of open and comprehensive education is of historical significance in advocating practice and strengthening education specialization. It is an educational mode created by the West in this context. To help college students build correct outlook on life, value and the world, the purpose is to practice the teaching mode of "great ideological and political" pattern. We will take humanitarianism as the end point and starting point, deeply care for students, deeply study the theory, directly understand the theoretical difficulties, and deeply understand the society, so that college students can learn theory. Experience the charm of Marxist theory, in the process of combining with practice, master the essence of Marxist theory, and guide their own practice teaching methods. Education is open, and it has become a trend.

This requires the application of multimedia technology and micro-media methods in teaching, which can not only improve the education methods, but also improve the quality of education, and also need to carry out targeted education activities.

4. Under the guidance of "great ideological and political education", we should form a pattern of "all staff education, whole process education and all-round education".

We should realize the whole staff education, the whole process education and all-round education. We should use moral education to pave the foundation of growth, and stimulate the positive energy of young students to fight for the Chinese dream.

The practice of ideological and political education in colleges and universities should be organized by the ideological and political education management and the organization of the party committee's advertising department. The party committee should be under the unified leadership of the party committee to realize the whole staff education, the whole process education, and the all-round education. The moral education should pave the growth background and stimulate the positive energy of the majority of young students to strive for the Chinese dream. The Youth League Committee, the Ministry of education and the Department of student affairs directly participate in the working mechanism and leadership system in education. All departments need to combine with each other, unite and perform their respective duties. The college party committee should provide ideological guidance and financial support for ideological and political courses. The student affairs department and the Youth League Committee need to carry out various practical activities inside and outside the university, combine with the local red culture, and deeply practice and study ideological and political courses. This not only solves the problems of ideological and political work, personal ideological and political theory education and student management, but also effectively develops ideological and political practice education.

5. Conclusion

To sum up, the author thinks: various theories and researches show that the classroom education of Ideological and political theory course is undoubtedly an important aspect of college education. It

is also very important to establish the concept of large-scale ideological and political education, deepen the reform of Ideological and political practice education in Colleges and universities, and establish a three-dimensional practical education mode of campus, classroom and society. The educational ideology under the mode of "great ideological and political education" advocates open, practical and individualized education, which is undoubtedly an important direction for the innovation, development and reform of Ideological and political courses.
