Abstract: In order to build a good learning environment for the study style, it is an important measure for colleges and universities to enhance their own competitiveness and shape the brand of high quality colleges and universities at the present stage, and it is the key link to carry out ideological and political education in colleges and universities. The construction of style of study is an important part of university brand competitiveness, and also an important link of ideological and political education for college students. With the rapid promotion of changing classes in colleges and universities in China, changing classes has gradually become an important factor in the construction of college style of study. With the popularization and application of "changing classes" in colleges and universities, "changing classes" has gradually become one of the main means to build the style of study and improve the quality of education and teaching in colleges and universities. This paper briefly analyzes the "change class" and its role in the construction of the style of study in colleges and universities, and probes into the practical path of "change class" in the construction of the style of study in colleges and universities in order to further construct the long-term mechanism of the construction of the style of study in colleges and universities, and to provide high quality education and teaching services for contemporary college students.

1. Introduction

Under the background of the rapid development of network technology, great changes have taken place in all fields, especially in the field of college education, which gradually presents the development trend of digitization, networking and openness. The "change class" is a new form of educational and teaching activities produced by the integration of modern university educational ideas and network resources. It uses new media tools and techniques to build a platform for online education and teaching activities, to launch various forms of online course resources, to create a good space for online learning and communication, and to enable students to complete recreational activities and learning tasks in college life through the "change class". In the construction of style of study, if colleges and universities want to give full play to the role of "changing classes", they should further expand the resources of style of study construction, integrate the network community, lay the foundation for the construction of good style of study, and promote the new development of style of study construction in colleges and universities[1].

2. "Changing Classes" and Its Role in the Construction of Study Style in Colleges and Universities

2.1. Basic Definition of "Shift"

"Yi class" (figure 1) is a kind of network platform with educational function, is a virtual campus community, is a virtual learning platform with college teachers and students as the main service object, it pays attention to the interaction and communication between students and teachers, and devotes itself to providing an open and multi-functional educational activity, teaching resources, life service, entertainment and leisure environment for college students and teachers. Now "change class" has integrated QQ、WeChat, Weibo, forum, blog and other resources to form a Web2.0

form; combined with these different network technology, can further realize the normalization of educational information in colleges and universities, and provide a one-stop education and teaching information service for teachers and students in colleges and universities. It can be said that "Yi Ban" is a comprehensive integration of WeChat, Weibo, forum and many other functions in one, can provide learning, entertainment, leisure, communication, storage, information sharing and other services complex[2].

Figure 1 Opening ceremony of "Yi ban"

2.2. The Role of "Changing Classes" in the Construction of Academic Style in Colleges and Universities

First, "Changing classes" can enhance the interaction of the construction activities of the style of study in colleges and universities. In the process of building the style of study in colleges and universities, the network platform of "changing classes" can provide college students with a variety of different life services, education and teaching activities services, cultural and entertainment services. In the past, students' individual learning atmosphere was mainly realized by individual learning activities, which was a subtle way of influence. The "change class" learning style construction activities mainly rely on online interactive communication to break the traditional time and space constraints, so that students can arrange their learning time and rhythm according to their actual situation, and form a learning consensus through mutual exchange of learning methods, achievements, experiences and experiences to create a good learning atmosphere[3].

Second, "Yi Ban" can enrich the content of the construction of style of study. In the past, in the construction of the style of study in colleges and universities, schools and teachers mainly created a learning atmosphere by carrying out a single learning activity, such as: curriculum research and practice activities, cultural speech competitions, professional skills knowledge competitions, etc. In "change class ", we can use network resources and Internet technology to change the form of study style construction activities, combine students' interests and hobbies and learning trends, obtain activity suggestions through data analysis, students can download relevant software or video according to platform suggestions, and enrich their knowledge literacy through small video, post bar posts, network articles and other different ways. In addition, some other learning software can be installed in the "change class ", so as to enrich the content of style of study construction.

Third, Change the role of the construction of the style of study in colleges and universities. In the construction of traditional study style in colleges and universities, schools and teachers are the main body of construction, students are the "people affected by the study style" or "executors of the study style construction activities ", while in the" change class ", students become the leading and implementing personnel of the study style construction activities.[4].

3. Practice Path of "Changing Class" in the Construction of Study Style in Colleges and Universities

3.1. Introduction of Advanced Technology and Construction of an Organizational Network of Learning Styles

In order to give full play to the important role of "changing classes" in the construction of the

style of study in colleges and universities, colleges and universities should actively introduce advanced technology, comprehensively optimize the construction and management system of the style of study, and realize the development of data, networking and modernization. With the continuous development and improvement of "change class" platform, there are many application software and plug-ins with different functions. University staff can use these software and plug-ins to update the management and construction methods of style of study in all aspects, so as to form a good network of style of study organization and reflect the application advantages of various software technologies in "change class ". For example, the staff can use the short message group function in the "change class" platform to relax the information for all the students in the class at the same time, so as to realize the transmission of important information and educational activity consultation, so as to enable the class students to receive the school activity notice in time and accurately, and avoid the situation of "information island ". In addition, the staff can also put forward the "change class" competition activities, so that students can take "building a harmonious change class" as the core theme, encourage students to actively develop the "change class" function, guide students to achieve independent management, so as to create a good atmosphere of learning[5].

3.2. Explore the Network Resources of Colleges and Universities and Build a Data Platform for Changing Classes

In order to give full play to the important role of "changing classes" in the construction of the style of study in colleges and universities, the staff of colleges and universities should fully integrate the network resources in the campus, create a "changing classes" data platform in line with the situation of colleges and universities, collect, analyze, summarize and store the data information of students, and provide important materials for the effective management of education and teaching in colleges and universities. Staff can make full use of the flexibility of "changing classes ", use relevant software to collect educational and teaching resources in schools, present them in the form of data in the platform, and urge students to make use of the learning and activity resources of the school independently, so as to lay a resource foundation for creating a good atmosphere of learning. In addition, the student information data can be transmitted to the platform, and the training system of high quality talents with pertinence can be formulated through data analysis to improve the quality of school teaching activities.

3.3. Promotion of the Concept of Inter-School Community to Create a Good Learning Culture

In order to give full play to the important role of "changing classes" in the construction of the style of study in colleges and universities, we should also put forward the concept of "inter-school" community, which is to break the existing regional barrier, strengthen the links between universities and colleges within the region and even between different regions, create "inter-school" community, further integrate our teaching resources, optimize the allocation of education and teaching resources, and create a good learning style in the network platform of "changing classes ". Through this "inter-school community ", students can watch videos of other schools and specialties, participate in professional practical activities between" inter-school ", enjoy high-quality educational and

teaching resources, and form a digital, standardized and open style of study system.[6].

3.4. Put Forward The Sharing Mechanism of Changing Classes to Promote the New Development of the Style of Study in Colleges and Universities

In order to give full play to the important role of "changing classes" in the construction of the style of study in colleges and universities, we should also put forward the mechanism of "sharing ", which is to take" changing classes "as an important information platform for educational and teaching activities and cultural services in colleges and universities, give full play to its openness and interactivity, and create a good learning style through communication, interaction and sharing, so as to realize the construction of the style of study in colleges and universities. In this process, colleges and universities should fully mobilize all forces, such as students, parents, social enterprises, colleges and universities in different regions, educational functional departments, etc., build an effective sharing platform in an all-round way, and set up contacts in all departments, majors and classes in the school, and strive to form a multi-level "changing class" learning network, so that college students can "integrate into the changing class ", improve the condensation of learning style in colleges and universities, and realize the new development of learning style.

4. Conclusion

To sum up, in order to give full play to the important role of "changing classes" and vigorously carry out the construction of the style of study in colleges and universities, we should start from the application technology, network resources, community concept, circulation mechanism and sharing mechanism, and construct the construction system of "changing classes" style of study in an all-round way. In the actual process, the leaders and teachers of colleges and universities should make great efforts to set up "change classes ", construct" change classes "data platform, and build" change classes "shared learning community, so as to create a good learning style, form a virtuous circle mechanism, encourage students to immerse themselves in a good style of study, embody the educational value of colleges and universities in modern society, and improve the comprehensive competitive ability of colleges and universities.
