Keywords: New era; Party members; Ideal faith education

Abstract: The development of reform and opening-up in the past four decades has brought about tremendous changes in Chinese society, and our society has entered a new era of socialist modernization. Facing the society, facing reality and facing the future, the new era provides new requirements and connotations for the education of the Party members' ideals and beliefs. To analyze the new path of the education of the Party members' ideals and beliefs, strengthen the Party's party consciousness, and lay a solid foundation for the early realization of the four comprehensive strategic layouts. Ideal belief is a person's core value pursuit, but also a political party, a nation, an important spiritual pillar of a country.

The education of the Party members' ideals and beliefs belongs to the scope of the Party's ideological construction, and throughout the history of the Communist Party of China, timely and effective ideological construction has played an important role in the party's great historical juncture.

The emphasis of the education of the ideal belief of the Party members in different times will also be different, the key lies in facing reality, facing the society and facing the future, adhering to the attitude of linking theory with reality, starting from reality and seeking truth from facts, keeping a close eye on the pulse of the development of the times, so as to keep pace with the times and develop innovation. Forty years of reform and opening-up have brought Chinese society into a new era, and the main contradictions in Chinese society have changed from the contradiction between the people's growing material and cultural needs and backward social production to the contradiction between the people's growing need for a better life and the unbalanced development.

The change of the main contradictions of society makes Party members and cadres keep up with the development requirements of the times, clarify their own role and the focus of work, so the education of ideal beliefs is particularly urgent and necessary.

1. What is the Ideal Belief of Party Members?

At present, Chinese society is following the road of socialism with Chinese characteristics, pursuing the guiding ideology of Marxism-Leninism and practicing the socialist system.

Therefore, the ideal belief that the Communist Party members of contemporary China need to establish is to adhere to the guiding ideology of Marxism, to build socialism with Chinese characteristics, and to strive for the eventual realization of communism. The Communist Party of China is the vanguard of the working class, as well as the vanguard of the Chinese people and the Chinese nation. Chinese society will always follow the socialist road and strive for the early realization of the communist society advocated by the revolutionary mentors Marx and Engels.

Socialism with Chinese characteristics adheres to the people's ownership status, takes the people as the center, adheres to the socialist road under the leadership of the Communist Party of China, adheres to the system of ownership of socialist public ownership, and implements the distribution system according to labor in the primary stage of socialism. Communism as a lofty ideal pursuit needs to always pursue, both to recognize its irreversibility Irreversible should be at the same time to see the realization of the long-term and arduous communist. At the same time, The Chinese

society is now in the primary stage of socialism, which needs to take hundreds of years to complete.

Party members and cadres should not only adhere to the ideal and belief of communism, but also keep their feet on the ground, base themselves on the reality of the current primary stage of socialism, and strive for the early realization of the two 100-year goals.

2. How to Strengthen the Education of Party Members' Ideal Beliefs?

First, adhere to the ideals and beliefs of communism and grasp the law of socialist construction with Chinese characteristics. As the ultimate pursuit of socialist society, communism needs to be pursued and adhered to insist. At the same time, Party members and cadres need to be based on the reality of China's social development, and grasp the law of socialist construction on the basis of mastering many facts of experience. Ideal belief sought not only to establish lofty value pursuit, but also to be realistic and pragmatic, grasp history and reality, and combine tradition with the requirements of the times.

At present, Chinese society has entered a new era, and the main contradictions in the society have undergone great changes, which put forward new requirements and challenges for the work of Party members and cadres. Second, realize the transformation of the ideal and belief education of the Communist Party members from single education to comprehensive education. In the past, the ideal and belief education was more of a single emphasis on the absolute loyalty of Party members and cadres to the Party, the political dominant position in the core, pay attention to party sex education, the content of education is relatively single.^[1]With the in-depth development of Chinese society in building a well-off society in an all-round way, the development of the real society has made the requirements for Party members become in-depth and comprehensive. Therefore, the ideal and belief education of the Party members in the new era involves the diversified indicators of political loyalty, social character, professional ism, family relations and personal character. The contemporary Communist Party members should not only be loyal to the Party, but also have to be excellent in business, good social evaluation, clean and clean family relations, etc. The diversified evaluation index system embodies the comprehensive tendency of the Party members' ideal and belief education.

In the future, the Communist Party members need to pay attention to their own comprehensive literacy cultivation in addition to maintaining the party nature of absolute loyalty, and strive for the early realization of the great goals of two hundred years and communism. Third, to realize the party members' ideal and belief education model diversification, hierarchy, improve the relevance of Party sex education. In terms of material conditions, the information age provides a diversified and timely medium and channel for the education of Party members' ideals and beliefs, and the educational conferences that used to take time and effort to mobilize organizations can now be completed through real-time network meetings. The new communication medium not only breaks the barrier of time and space area, but also helps to realize the interactive communication, and avoids the disadvantages of one-way education. From the point of view of the personnel structure of Party members and cadres, the age, education, occupation and family background of the Communist Party members in the new era show the characteristics of pluralism, which leads to different Party members' understanding and reception of ideal beliefs, and the diversity of personnel structure leads to the diversification of ideological cognition.

Therefore, the education of ideals and beliefs needs to be targeted education according to the different levels, different occupations and ages of Party members. Fourth, to enhance the scientific and pragmatic content of education, to achieve the diversification and appeal of educational methods. The education of the ideals and beliefs of Party members in different times is different, and the relevant departments should update the educational content in time to keep pace with the times, keep up with the trend of the times, and realize the scientific and pragmatic content of education. The essence of education lies in the usefulness and learning learned, and the education of the party members' ideal belief sits on the spiritual cognition of Party members and cadres. Therefore, the ideal educational activities of Party members should be aimed at practical problems, point clear, content enrichment, and truly strengthen the loyalty and timeliness of Party members,

do a good job of the people's public servants should assume the responsibility.

3. Problems and Misunderstandings That Need to be Avoided in the Educational Practice of Party Members' Ideals and Beliefs

First, avoid the "pan-formalism" of ideal and belief education, and beware of walking the horse to see the flowers. The 18th National Congress of the Communist Party of China clearly states: "Party member education should grasp the fundamental construction of ideological theory, grasp the core of Party sex education, grasp the foundation of moral construction, and educate and guide Party members and cadres to firmly establish a correct outlook on life, power and career." "In the specific practice link, individual Party members and cadres because of their own knowledge and personal understanding of the limitations, often the Party members' ideal faith education into nothing, think that this is a waste of time, not true to the truth.

Therefore, in the specific learning process often appear slack attention, learning is not serious, and even the opportunity to take leave, such as absenteeism, truancy behavior. This pan-formalism makes the effectiveness of educational practice greatly diminished. Ideal faith, as a spiritual pillar of a person, plays the role of guiding the light and spiritual enlightenment. In the course of educational practice, relevant units and organizations should do a good job in the guidance of students, arrange educational courses rationally, improve the scientific and pragmatic content of teaching, and grasp the laws of education.

Make the Party members' ideal faith education really look in the mirror, the crown, wash the bath, cure the disease, promote the Party members' self-purification, self-improvement, self-innovation, self-improvement. Second, innovate the method of ideal and belief education of Communist Party members, and enhance the relevance and timeliness of education. In the past, the ideal and belief education of The Communist Party members was more of a faith document, reading a newspaper, listening to lectures, talking about these customary methods, the new era needs to combine new media and channels to enhance the interaction and timeliness of educational activities. The emergence of new media such as microblogging, WeChat and video conferencing has given new ways to new era education activities, and relevant organizations should be flexible in using these media so that educational activities can truly be in the mind. Comprehensive use of theory teaching, menu selection, seminars, social research, on-site simulation, personal analysis, collective review, thematic reports, behavioral experience and other modes, to promote the education mode from the call-to-call to the truth-inspired, from the simple "filling the duck" type to the experience penetration transformation.

The innovation of methods in order to realize the students' true learning, true understanding, true faith, true use, and really establish the belief of communism. Third, expand the connotation and extension of Party sex education, and integrate the theory of Party building, knowledge of Party history and the construction of the Party's clean and honest government. Party members' ideal and belief education can not be limited to the Party's education, around the history of the creation of our party, combined with the latest essentials of ideological construction, organizational construction, style construction, system construction and anti-corruption and anti-corruption construction, to achieve the spiritual baptism of students, to a real vivid theoretical study and ability cultivation.

So that all Party members and cadres to truly establish the system of socialism with Chinese characteristics self-confidence, theoretical self-confidence, road self-confidence and cultural confidence.^[2] Fourth, start with the problem, and really solve the ideal and belief of Party members and cadres. The outstanding problems existing in the field of ideal belief of the current Party members are the lack of faith, the wavering of faith, the feudal superstition and the spiritual emptiness, and the educational activities should find the root cause of these problems and do the cure for the problem. The solution to the above problems first needs to join the index system of evaluation, so that Party members and cadres can really attach importance to this. In accordance with the Party discipline and party rules, establish a list of responsibilities for the education of ideals and beliefs. To clarify the subject of responsibility, so that Party members and cadres clearly their own protection and responsibility for the spiritual home of the Communists. In the practice of

education, Party schools, administrative colleges and cadre colleges at all levels should carry out their main channel responsibilities.

Facing the four major risks and four major tests of the Communist Party's ruling power, Party members and cadres should have a sense of crisis and consciously practice the individual's responsibility to guard. ^[3]Since the founding of the Communist Party of China, it has pursued Marxist-Leninist thought. In the process of the Chineseization of Marxism, Mao Zedong Thought, the theoretical system of socialism with Chinese characteristics and Xi Jinping's new era of socialism with Chinese characteristics have been gradually established. The fruitful theoretical achievements provide detailed material for the ideal and belief education of the Communist Party members, especially the new era of socialism with Chinese characteristics established by Xi Jinping since the 18th National Congress. Around two hundred years, four comprehensive and anti-corruption construction has produced the latest theoretical fruits, accompanied by the great achievements of the reform and opening-up 40 years help to establish the true identity of Party members and cadres.

Ideological education should be integrated with system construction to ensure two-legged walking, to achieve the "soft constraint" and "hard constraint" combination.
