Keywords: Logistics support; Party building; Modernization; Core role

Abstract: Logistics Party building is an important part of Party building in Colleges and universities. It is the premise and guarantee for the smooth development of logistics work. With the gradual development of the modern economy, the party building work in our country is becoming more and more important. Therefore, it is necessary to make a gradual development and change, and make a practical analysis of the problems. Logistics has not only the educational attribute of higher education institutions, but also the service attribute of logistics support. The particularity of this multiple attribute determines that the Party organizations must play a political core role. To improve the quality of management and service quality in the later period, people can better carry out grassroots construction activities. In the course of the party building work, it also brought considerable challenges and development to the logistics support system. Only when the logistics management department gives full play to its own strength can we mobilize all aspects of the forces and thus contribute better to the country.

1. Introduction

Firm and correct political direction is the soul of school work, and the task of logistics party building is always to ensure the correct direction of development [1]. Furthermore, we should give full play to the political advantages of Party organizations and implement the Party's educational policies and policies in an all-round way. Party building refers to Party building. The so-called branch refers mainly to the Party's grass-roots organizations. In the Party's daily work, it is the grass-roots Party organizations that play the core cohesion and gather the Party members into a whole [2]. Logistics has not only the educational attribute of higher education institutions, but also the service attribute of logistics support. The particularity of this multiple attribute determines that Party organizations must play a political core role [3]. How to improve the logistics service support ability and meet the new requirements for logistics work in the development process, the key is to play the political core role of the logistics party organization [4]. In the process of construction, it is necessary to adhere to the guiding ideology of taking the scientific concept of development as an important one. To effectively and effectively link the logistics party building work and the logistics reform, management and service work, and play a huge political role.

In most of them, the party branch of the logistics management department is the core and focus of the whole. In the process of deepening the reform of higher education, facing a series of newly created contradictions and problems, it also put forward new requirements for the party building work of logistics [5]. The logistics party organizations should attach importance to and comprehensively strengthen the work of party building, take the initiative to adapt to the new situation, and actively explore new ideas and methods for party building work [6]. In the process of carrying out its party building work, it also brought considerable challenges and development to the logistics support system [7]. It is necessary to reform and improve all aspects of its work, so as to maximize the important role of its Party building work in the logistics support system [8]. Only when the logistics management department gives full play to its own strength can it mobilize all aspects of strength so as to better contribute to the country [9]. In the party's daily work, it is the grass-roots party organizations that play a central cohesive force, gathering party members into a whole [10]. Only by improving the quality of management and service in the later period can grass-roots construction activities be better carried out. Only by paying special attention to the actual effect of branch construction can the overall service quality be improved.

2. The Characteristics of Logistics Party Organization and the Present Situation of Education and Training

The goal of logistics is to continuously improve service support capabilities and serve the school as a whole. Driven by this goal, many units tend to focus only on administrative work and have insufficient importance and awareness of party building work. The logistics party building work is to fully demonstrate the initiative, show concreteness and exert its own characteristics. Under the new situation of the new era, the party's grass-roots organizations have implemented the requirements of governments at all levels in the mainstream of branch work, which is still good. The logistics staff are generally older and have a lower level of education. They focus on hard work and neglect learning. The party organization of logistics has not fully played its role, and the subjective initiative of party members and cadres cannot be fully exerted in the work. In the process of development, it can play a role of stabilization and guarantee, and in the modern times, the scale has been expanding constantly. Due to some problems left over from history and the limitations of different management methods in different places, there are also some problems in Party branches at all levels to varying degrees. Whether in modern enterprises or enterprises and institutions, because of its expanding scale, the number of personnel also needs to be constantly increased.

In view of the current situation of Party building at the grass-roots level in logistics and the existing problems in Party members' education and training, Party organizations at the grass-roots level in logistics should seriously consider and study innovative ways and means of Party members' education and training. Logistics service security posts are scattered, working hours are fixed, and many Party members are distributed in the front line. Regular collective activities are difficult to implement, resulting in the lack of innovation in the activities of logistics party organizations. It is necessary to make a scientific and sufficient study of the logistic management in order to maximize the guarantee role of Party building in logistic work. For the construction of its logistics management personnel, it can maximize the improvement, and exert its awareness of many aspects such as worry, integrity and innovation. The logistics department is not the leading army that is in charge of the battle, so its position in the collective has not received extensive attention. Therefore, the management aspect is very lagging, and it is difficult to train new people to take over the overall work.

The vocation of logistics is to serve the teaching and research, and to serve the teachers and students. This is the basic standard for measuring whether a logistics team is qualified or not. Carry out humanistic quality education and vocational skills training through party building work. In the teaching process, computer software technology was used. An example is presented. This helps to observe the simulation of quality education instructional design from different directions. The experimental results of the three experiments are shown in Figure 1.

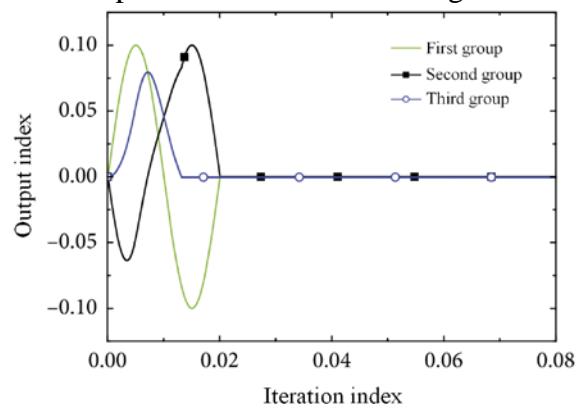

Fig.1. Iteration value and output relationship

While doing a good job of party activities, we must also pay attention to the effective combination and consent of the forms and contents of party activities, and adhere to an innovative attitude to carry out new activities. It is possible to invite some activists who join the party to participate in the activities of the party. This will not only strengthen the ideological education in

the activities, but also further expand the party's influence on the masses. It is necessary to closely integrate the characteristics of logistics work under the new situation and the ideological status of logistics staff, and carry out ideological education flexibly. Constantly enrich the carrier of ideological education and improve the learning effect. In carrying out logistic Party building work, the person in charge of Party building work should be based on the actual situation of logistic work. Fully combined with the requirements of the post, to form a good system and norms. In order to ensure the normal and stable development of the logistic management team, we should comprehensively construct the management cadres and the talent team in the logistic management system. The experience of past construction experience should be combined with the actual situation of our department to establish a Party branch suitable for the needs of our logistics department, and constantly complement and improve it in practice.

3. Innovation to Improve the Effectiveness of Logistics Party Building in Colleges and Universities

To fully improve the effectiveness of Party building in logistics, the first thing is to constantly improve and strengthen the ideological awareness of logistics staff and workers. With the demonstration construction work of striving for excellence as the booster, and others that have not been identified as demonstration sites, they still actively carry out their work in accordance with the conditions for the establishment of demonstration sites. Inner-party activities are an important measure for higher Party organizations to organize members to carry out learning and education management. It is a very effective action to train the Party spirit of Party members and to receive the education of Party organizations. Among the people in the unit, there are contradictions that are both party members and party members. It is necessary to combine the characteristics of logistics work, organize learning and research on logistics management theory, and learn modern enterprise management knowledge to meet the needs of logistics reform and development. In the daily work, logistics management is relatively more.

In the training and training of staff, it is necessary to establish a strict learning and training system, and through a strict system to comprehensively regulate their own behavior. Only by allowing all logistics cadres and workers to ideologically recognize the importance of party building work for the development and improvement of logistics work can the party building work be implemented. Party building actively and effectively educates college students about network laws and regulations, and strengthens the concept of network law. Actively carry out network legal services and make use of network superior resources to enable college students to carry out legal network exchanges and promote the all-round development of College students. The results of four surveys of a teacher's teaching satisfaction after two months are shown in Table 1.

Table 1 Teaching satisfaction

	Sample size	Satisfaction
First survey	60	61%
Second survey	60	72%
Third survey	58	75%
Fourth survey	57	81%

To formulate the outline of education and training and the annual plan of education and training, and to conduct an annual political theory examination. The examination results are recorded in the assessment certificate of Party members. Party building is a complex systematic project, which is composed of all aspects of the work of the Party functional departments, without the process of Party work and its actual effect. Party members should be fully mobilized to seriously discuss and brew branch candidates, and adjust their candidates on the basis of extensive consultation with Party members and staff members. In view of the fact that the labor contract workers are old and have low levels of education, and the theoretical study has certain difficulties, they must constantly innovate in the content and form of learning. According to the study plan of the party committee

central group, the requirements for innovative learning should be in different stages. When carrying out the work of party building in logistics, we must first fully attract the attention of logistics leaders. This is the basis for the party building work to be fully carried out. In the actual work construction, it is necessary to carry out the business development according to the actual situation, and the leadership team needs to be fully established.

4. Conclusions

The party building work of logistics has its own particularity and complexity. Only by grasping the main aspects of contradiction can we better resolve the contradictions. Based on the characteristics of the party building work and the current status of education and training, it is necessary to establish a long-term education and training system for party members and enrich the training content of party members. Only by constantly summarizing and learning, constantly improving its own work, and maintaining close ties with the party organizations at the higher levels, can we continuously carry out its own adjustments and revisions. Strengthening the party building work of the branch is a crucial and urgent problem to be solved in the process of large-scale reform and development and innovation at the current stage. In the actual operation of the logistic party building work, we need to constantly strengthen the way of education and training. According to the actual situation to use different methods and measures to achieve an effective solution to the problem. For their own work ability can play a role in improving the overall development of logistics support system. We should take various forms and measures to do a good job in the education and training of Party members so as to give full play to the role of the fighting fortress of the branch and the vanguard and exemplary role of Party members. And then make contributions to logistics development and development.
